**POLYACTIL-N**

[Buy Now](#)

**Polyactil-N** is a skin regeneration gel, use for Wounds, Cuts, Burns, Scrapes, Chapped Skin, Cracked Skin and more.

## Product Description

**Polyactil-N** is the leading-edge alternative for wound control. In addition to being an amazing product for general first aid, such as burns, cuts and scrapes, Polyactil-N is also excellent for skin damaged by winter or summer exposure. Our “Superior Polyelectrolyte Technology” involves the use of carrier ingredients to release the protection and relief in a controlled manner for long-lasting action and to enhance efficacy of the product. It is water-based and deep penetrating to help rehydrate dry or damaged skin and lip tissue. Being antibiotic-free and antibacterial-free, Polyactil-N is safe for open wounds. This product works to restore the original integrity and attractiveness to damaged skin ... or in many cases better than the original condition. Damaged, unhealthy skin is a breeding ground for bad bacteria,

which can lead to a variety of problems. Polyactil-N works compatibly with the micro-domains of the cells in the epidermis and the cells surround blood vessels, allowing these micro-domains to function naturally and have their own innate immunity. Thus the body's own ability to ward off harmful agents is promoted, rather than being inhibited as it is with many other products. Polyactil-N also works in harmony with your own normal collagen and cholesterol, allowing them to be used by your skin as nature intended for amazing protection and relief.

**Polyactil-N** is free of hormones, antibiotics, steroids and cortizone, safe and effective without side effect.

## Instruction

Apply after injury as soon as possible, two to three times a day.

**For serious wounds**, apply Polyactil-N then immediately apply Petroactil, using this combination two to three times per day. Safe on all types of skin.
